

20th March 2020

We are proud to introduce to you the new function selector

FSD6

The world of automatic doors was black and white until yesterday, starting from today FACE transforms it into colours with its new function selectors

You can choose between four standard colours or ask for the colour you want and we will produce it exclusively for you.

It is also possible to request further customizations as detailed in the specific price list.

The new function selector **FSD6** is designed to have the total control of the functions of the automation/s to which it is connected and it combines harmony and elegance of shapes and colours to high technological contents.

The activation of the function selector can be restricted to authorized people with the use of a code. The compact dimensions (Length 42 mm, Height 140 mm, Width 15 mm) allow to fix it on thin profiles and vertical uprights.

The new electronic function selector **FSD6** will substitute the **FSD4** function selector that will be out of production.
